

CHS[®]

PAVER[™]

Herbicide

CHS Paver[™] is a selective postemergence herbicide for control of broadleaf weeds in wheat, barley, oats, rye, grasses grown for sod and flax.

- CHS Paver is labeled for use in wheat and barley with a broad range of tank mix herbicide partners to address specific weed issues.
- CHS Paver has a wide application window for wheat and barley from 3 leaf stage to prior to boot.
- CHS Paver is a combination of two modes of action.
- CHS Paver combines a Group 4 (growth regulator) and a Group 6 (photosynthesis inhibitor) to enhance weed control.

CHS Paver should be applied to emerged and actively growing broadleaf weeds to maximize weed control.

CHS Paver is a emulsifiable concentrate formulation that contains two modes of actions.

CHS Paver keys to weed control:

- Apply to emerged and actively growing broadleaf weed seedlings to maximize control.
- Application volumes should be made to achieve maximum spray coverage of targeted weeds.
- To maximize weed control, make applications when the majority of weeds have emerged as CHS Paver does not provide residual control of not emerged weeds.
- Make herbicide application when the crop is actively growing, targeting environmental conditions that will not stress the crop.

Active Ingredients

Bromoxynil & MCPA Ester

Herbicide Group

6 & 4

Number of AI/Gal

2.0 #/gal Bromoxynil & MCPA Ester

Package Size

2x2.5 gal case

Always read and follow label directions.
